Wired Controller
WDC3-86X2

Features

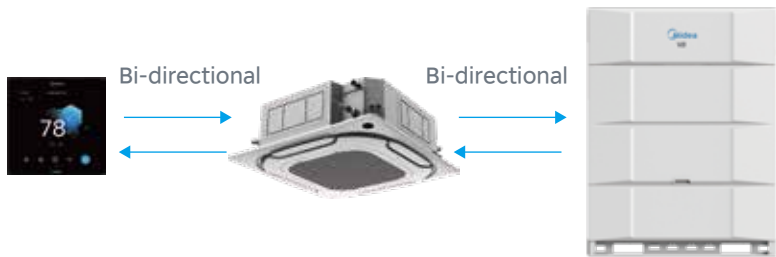

Full Touch Screen

The full-touch screen wired controller is equipped with a sensitive touchscreen, allowing intuitive adjustment of temperature, fan speeds and various modes - no physical buttons required. Its ultra-thin and compact body makes it perfectly suitable for modern interior decor.

Bi-directional Communication

The wired controller can query the system operating parameters thanks to the new bi-directional communication functionality. In addition, settings including static pressure, cold draft prevention and temperature compensation can be configured on the wired controller.

One-to-Many Control

One controller can be used to unify the settings across up to 16 indoor units.

App Control

The WiFi function makes it very convenient to control indoor units through Midea's "smart Home" app.

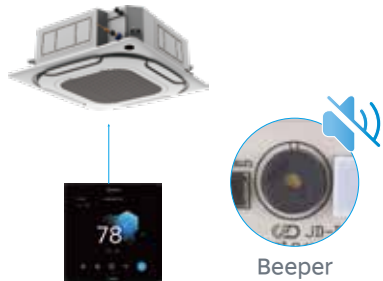

2 Permission Levels

2 permission levels ensure users can easily access control functions while allowing administrators convenient access to operating parameters.

Beeper On/Off

The alert beeper on the indoor unit can be turned off to create a quieter environment.

Humidity Setting

For some IDU, humidity adjustment is supported in DRY mode.

Schedule Setting

The schedule function allows users to set multiple weekly schedules each with its own operating mode, temperature settings and fan speeds.
